Description

Linear slot diffusers (LDS) can be ceiling or wall mounted. They were designed to supply warm/cold air. They are available in versions with 1 to 4 slots and with the lengths of 495 and 990 mm. Each slot is adjusted separately and has two deflection vanes. Thanks to their special construction, the direction of the supply air can be switched easily.

In addition, due to easy operation, the slot diffusers are ideally suited for integration with air handling systems of variable capacity.

Material: aluminium

Finish: powder painted RAL9016

Standard color: white
